SECTION IV.

SCOPE OF WORK

The City of Corona Department of Water and Power is seeking a qualified information security consultant to conduct both a Network Infrastructure Assessment and a SCADA Security Management Review. The objectives of the project are:

- Analyze the current security posture of the City
- Identify vulnerabilities that might result in significant security incidents
- Provide the City with actionable recommendations for improving security

A. Network Infrastructure Assessment

The purpose of the Network Infrastructure Assessment is to identify vulnerability points in a wide range of systems on the City's network, including workstations, servers and network devices such as routers and switches—including wireless—that would allow an attacker to access the organization.

The perspective of the Network Infrastructure Assessment is to focus on identifying vulnerabilities from both the point of view of external and internal attackers.

City of Corona
14 Servers
30 Workstations
12 Networking Devices
Wireless Enabled

For assessed devices, the City expects the consultant's assessment to examine the current level of security with regard to:

- General High-Level Configuration Best Practices
- Patch Levels
- Common Misconfiguration Implementations
- Use of Common Usernames/Passwords

Deliverable: The consultant shall deliver a report, including a description of vulnerabilities found during testing, with actionable recommendations to fix identified flaws at both the detailed technical and managerial level. Recommendations shall be prioritized with respect to both criticality and ease of remediation. The report shall be detailed enough to enable technical staff/developers to immediately move towards remediation and increase the City's current level of security. The assessment report shall include a summary briefing of the consultant's findings and recommendations to appropriate management and technical personnel.

B. SCADA Security Management Review:

The purpose of the SCADA Security Management Review is to compare the City's SCADA security management practices to SCADA security management standards of care, including:

- The City's need to secure its SCADA systems
- The extent of the City's SCADA security management practices, including its policies and procedures
- The gap, if any, between the City's SCADA security management practices and evolving SCADA security practices

The Review will cover both:

- Executive Management, including policies, classification, awareness training, third party security management, etc.
- Information security management of the IT infrastructure, including network maintenance, access control, backup and recovery, etc.

The City expects the selected vendor to conduct the SCADA Security Management Review using a methodology incorporating, at a minimum, SCADA security guidance, industry standard frameworks such as ISO 27001, other information security standards such as the PCI Data Security Standard, as well as applicable Federal laws and regulations. The methodology is expected to be sufficiently robust to uncover SCADA security management weaknesses against standard threat profiles.

Deliverable: The consultant shall deliver a report documenting the City's current SCADA security posture, the extent to which it meets the City's SCADA security needs and SCADA security standards of care. The consultant shall provide prioritized strategic and tactical recommendations for strengthening the City's SCADA security management posture so that it more effectively meets the City's SCADA security needs.

C. Project Management and Key Personnel:

The consultant shall identify its project manager for this project. The consultant shall identify key project personnel for both the Network Infrastructure Assessment and the SCADA Security Management Review.

D. Schedule:

The City expects the consultant to complete the SCADA assessment in four (4) weeks.

E. Selection Criteria:

1. Knowledge of the City's IT infrastructure
2. Experience conducting information security technology and management assessments
3. Capability, background and experience of key project personnel, including industry and academic experience
4. Use of cutting-edge tools for the network infrastructure assessment

5. Ability to tailor information security best management practice recommendations to the unique management structure of the City
