

Pyro City Denver is a fireworks wholesaler/retailer serving a multi-state region of fireworks retailers in addition to its own many retail locations spread across four states.

Needed currently is a part-time seasonal consultant interested in an ongoing relationship. Support will be needed for 50-100 hours each summer.

Core competencies:

- The ability to modify data in an MS Access database using its query language (if you're comfortable with any SQL-like language then that's also fine);
- The ability to modify interfaces created in MS Access;
- The ability to program conditional statements in MS Excel;
- The ability to create Pivot Tables in MS Excel;
- The ability to create CSV files from Excel for upload to Vend, a web-based point-of-sale system;
- The ability to design and implement a disaster recovery strategy prior to beginning work.

Some work will need to be completed at the retail location at 5401 Federal Blvd., mainly meetings to get acquainted with the system and the tasks at hand. Other work can be completed remotely. An introduction to the system will be provided by a developer.

Due to the nature of the fireworks business, it will be crucial that you are available on relatively short notice to manage outages or problems that occur while the sales season progresses, which is very rapid.

Pyro City is proud to offer a fun and respectful atmosphere. Some members of management also have developer skills so communication is easy. More information about Pyro City is available at <http://www.pyrocityfireworks.com/denver-co/>.

Please respond with information about your experience, skill set, and a proposed hourly rate.
