II.1.5) Short description of the contract or purchase(s):

UCL is seeking a commercial partner to provide a software solution to support integration of its diverse patient sample collections and research platform data. As one of Europe's leading biomedical research centres, UCL and its partner hospitals are working together to maximise value in translational research. We intend to implement a federated software solution which will work across our diverse campus locations, integrating research and clinical data, accessible via a web-based query system.

The integrated solution must comprise several functionalities including: sample tracking and freezer management, with RFID recognition capability preferred; a database for patient clinical and phenotype information which supports clinical ontologies; a laboratory management information system for genomics with automated collection of both microarray and next generation sequencing data. Each capability of the integrated platform must be web-accessible with security levels implemented to regulatory standards. The system must be sufficiently flexible to handle the diverse data structures of UCL's existing range of patient cohort studies.
